Freddy Shaikh

SENIOR SOFTWARE DEVELOPER · GENERATIVE AI & AGENTIC SYSTEMS

Toronto, Canada

+1(437) 267-3291 | shaikhfh1@gmail.com | freddyshaikh.com | Freddy-S3 | freddy-shaikh

Summary

Senior full-stack software engineer, 7+ years across Python, Go, Java, C#, and TypeScript, from software design and architecture through launching products in production. Designated lead for AI agent and agentic framework development at Morningstar, owning technical design of large language model (LLM) features end to end. Google Cloud Certified Professional Cloud Architect.

Skills

Generative AI & Agents	AI agents and agentic frameworks (Model Context Protocol), agentic orchestration, large language models (LLMs), speech synthesis (SSML), prompt engineering
Languages	Python, Go, Java, C#, TypeScript, JavaScript, Bash, SQL
Infrastructure & Cloud	Microservices and service decomposition, Docker, Kubernetes, Kafka, Terraform, CI/CD, GCP, AWS
Practice	Technical design ownership and design review, cross-functional delivery with Product and UX, data structures and algorithms, testing frameworks, Tableau

Experience

Morningstar

Toronto, Canada

SENIOR FULL STACK SOFTWARE ENGINEER

January 2025 - PRESENT

- Technical SME for AI agents and agentic frameworks: owned technical design of an MCP (Model Context Protocol) agent server from proposal through design review to release, defining its tool interface and context scoping against trade-offs in tool surface breadth, latency, and safe failure modes.
- Launched an LLM-powered conversational audio experience end to end: back-end services generating SSML-driven speech from large language model output on AWS Bedrock and Polly, plus a Vue front end with synchronized transcript and smart-summary surfaces over playback.
- Designated lead for AI-driven engineering acceleration in a matrixed, cross-functional setting: built the agentic developer infrastructure - skill files, scoped context and token budgets, operating-mode guardrails - and mentored senior and principal engineers onto it.
- Designed and deployed CI/CD pipelines with infrastructure as code, cutting deployment time for serverless and container services, and automated recurring engineering workflows in Python.
- Built an automated Playwright test suite covering smoke, unit, and integration tests.

Santoku Corporation / Rimm.ai

Toronto, Canada

SOFTWARE ENGINEER

August 2019 - January 2025

- Led the decomposition of a monolithic on-premises application into independently deployable cloud services, owning the service boundaries and the design trade-offs across data consistency, latency, and failure isolation.
- Built out the resulting large-scale infrastructure on public cloud (AWS) with Docker and Kubernetes orchestration, improving uptime through independent deployability and fault isolation, and guiding the team through the resulting performance and reliability work.
- Primary technical decision-maker for custom haptic VR training systems delivered to enterprise clients: led the technical relationship and co-development with external client engineering teams through requirements, software design and architecture, implementation, automated unit/integration testing, launch, and five and a half years of production maintenance.

Japan Exchange Teaching (JET) Program

Tokyo, Japan

ENGLISH LANGUAGE TEACHER

August 2018 - August 2019

- Taught English to 1,500+ students in Tokyo, working in self-taught Japanese.

Projects

Agentic Engineering Harness - open source (GitHub)

- Provider-neutral agentic framework for autonomous coding agents across GitHub Copilot, Claude Code, and Codex: 30+ skills with an explicit routing table, and a usage-limit-aware queue that resumes work after rate-limit resets.

Certifications & Education

2023-2026 **Certifications,** Google Cloud Certified Professional Cloud Architect; AWS Certified Solutions Architect - Professional; AWS Certified Machine Learning Engineer - Associate; AWS Certified AI Practitioner

2018 **Bachelor of Honours Science,** McMaster University — *Hamilton, Canada*
